

Fabco CNC Machine ready to ship!

The automated CNC process precision cuts components to regular and irregular shapes that can then be used by themselves, or made part of more complex assemblies. CNC routing provides an economical solution for rapid turnaround of long and short runs of products fabricated from sheet plastic. Our machinists efficiently produce precision components from large stock and effectively respond to customer needs for high volume through-put.

COMMON MACHINED PLASTIC MATERIALS INCLUDE:

HDPE
PVC
CPVC
Acrylic
Polycarbonate
Polypropylene
UHMW

APPLICATIONS:

Signs
Letters
Aerospace
Medical
Oil & gas

Our in house drawing department can assist you creating one piece or several thousand.
